ACA
Goniophotometer System

In our company, documenting quality and the reliability of phototechnical characteristics is a key priority. Thanks to our modern goniophotometer, we can check, optimise and document every luminaire we produce, ensuring precise integration into demanding projects. Having this technology on site establishes us as a valuable partner for architects, engineers and technical companies seeking lighting solutions. By integrating goniophotometer technology into our production process, we are investing in scientifically based lighting solutions. We combine our expertise with measurable accuracy because professional lighting starts with reliable data.

We support architectural and electromechanical studies by providing reliable data for the correct selection of luminaires according to the type of space and project requirements.

Quality assurance: The data we collect is based on actual measurements, not theoretical models. This supports the issuance of valid photometric files (e.g. IES, LDT), which are essential for lighting studies, tenders and public and private sector projects. This data is ideal for use in lighting simulation programs (Dialux, Relux and AGi32).

Competitive advantage: Few companies have in-house equipment of this calibre. Having a goniophotometer enables us to offer personalised solutions, immediate evaluation of new products and continuous quality control.
